TIPS TO KEEP YOU SAFE THIS WINTER:

- Carbon Monoxide (CO) is a colorless, odorless and tasteless gas that is hazardous.
- Sources of CO can include natural gas fireplaces, furnaces, stoves and water heaters not properly installed, or are malfunctioning.
- Symptoms of CO are similar to those of a cold or flu.
- If you suspect a CO problem, leave your home immediately and if necessary seek medical attention.
- Call DTE Energy at **800.947.5000** to have an emergency inspection performed.

Remember to install a carbon monoxide alarm in your home.
